SUMMARY

IT Engineering student transitioning from frontend to full-stack development with a practical MERN learning path.

Hands-on project experience with React interfaces, component-driven architecture, and deployment-ready portfolio work.

Seeking a Full-Stack Intern role to contribute across UI, API integration, and database-backed feature development.

EDUCATION

Bachelor of Engineering in Information Technology (BE.IT) — NCIT, Pokhara University

Current Semester: 5th | Expected Graduation: 2026

PROJECTS

Sublytics — Co-Founder & Frontend Developer

- Built and improved subscription-tracking product interfaces to help users manage recurring payment workflows.

- Established modular frontend structure to support scale-up toward full-stack product development.

- Collaborated on product direction and iterative release improvements based on usability priorities.

Personal Portfolio Website — React Project

- Developed a production-style personal site with responsive layout, theme support, and structured component design.

- Added project and skill sections aligned to software role requirements and recruiter-first readability.

- Maintained codebase with clear section architecture to support rapid updates and future backend integration.

TECHNICAL SKILLS

Core: HTML, CSS, JavaScript, React

Backend Learning: Node.js, Express.js

Databases: MySQL, MongoDB (Learning)

Programming Fundamentals: C, C++

Tools: Git, GitHub, Responsive Design, Basic UI/UX practices
